Portfolio: surendar-dev-tech.github.io/portfolio | Location: Chennai, Tamil Nadu, India

PROFESSIONAL SUMMARY

Java Full Stack Developer with hands-on experience building scalable web applications using Java, Spring Boot, Angular, and microservices architecture. Skilled in RESTful API development, JWT authentication, database optimization, and cloud deployment on AWS EC2. Experienced in designing CRM-based enterprise applications and improving application performance and scalability.

EDUCATION

Master of Computer Applications (MCA)

Mohamed Sathak College of Arts and Science – Chennai

2023 – 2025 | CGPA: 7.96

TECHNICAL SKILLS

- Programming: Java
- Backend: Spring Boot, Spring MVC, Hibernate, JPA, Servlets
- Frontend: HTML, CSS, JavaScript, Angular, TypeScript
- Database: MySQL, PostgreSQL, MariaDB, JDBC
- API & Integration: REST API, WebClient, WebSocket
- Security: JWT Authentication, RBAC
- Architecture: Microservices, MVC
- Tools: Git, GitHub, Eclipse, Spring Tool Suite (STS), Visual Studio Code, Docker
- Servers: Apache Tomcat
- Cloud: AWS EC2
- Methodologies: Agile, Scrum
- AI-Assisted Development: Cursor, Claude

EXPERIENCE

Java Full Stack Developer Intern

Softtwig Technology Solutions – Chennai

April 2025 – Present

Built CRM-based enterprise applications using Java, Spring Boot, Angular, and microservices architecture.

PROJECT EXPERIENCE

MyCrm – CRM Application (Spring Boot MVC)

April 2025 – June 2025

A CRM-based sales management portal created to streamline end-to-end sales operations including Products, Pricing, Leads, Opportunities, Invoicing, and GST compliance.

Tech Stack:

Java, Spring Boot, Angular, RESTful APIs, MySQL, JWT Authentication

Key Contributions:

- Engineered **end-to-end sales workflows** from quotation to invoicing using Spring Boot MVC architecture.
- Developed and integrated **RESTful APIs** for lead management, quotations, and invoice generation.
- Built **responsive Angular UI screens**, reducing page load time by approximately 30% and improving user experience.

- Developed **GST-compliant tax calculations** and invoice validation logic.
- Integrated **JWT-based authentication** with role-based access control.
- Enforced **pricing, discount, and tax rules** to ensure billing accuracy.
- Optimized **MySQL queries and transactions**, improving invoicing reliability and performance.
- Deployed the application on a remote server.

MySaleza – CRM Application (Microservices Architecture)

June 2025 - Present

Redesigned the MyCrm system using a **microservices architecture** to improve scalability, maintainability, and fault tolerance.

Tech Stack:

Java, Spring Boot, Spring Cloud, REST APIs, **RabbitMQ**, **PostgreSQL**, JWT, Spring Cloud Gateway, Eureka Service Discovery.

Key Contributions:

- Refactored the monolithic CRM into **independent microservices** including User, Product, Pricing, Sales, and Invoice services.
- Implemented **Spring Cloud Gateway** for centralized routing, authentication, and request handling.
- Used **Eureka Service Discovery** for dynamic service registration and inter-service communication.
- Configured **asynchronous communication using RabbitMQ** to handle invoice creation, notifications, and event-based workflows.
- Constructed **secure inter-service communication** using JWT-based authentication and role-based authorization.
- Ensured **GST tax calculation and invoice validation** across distributed services.
- Improved **scalability and fault isolation** by decoupling core sales and invoicing modules.
- Configured **PostgreSQL databases per microservice**, improving data consistency and transactional reliability.
- Streamlined database queries and service interactions to enhance system performance.

CERTIFICATION

Java Full Stack Developer Certification – Techietact
